

KEEP THE MINERY OR STOP IT!

POLLUTION PROBLEMS:

Cons

- water pollution
- deterioration of vegetation cover
- biodiversity loss
- air pollution

Pros

- greater source work
- macroeconomic growth.
- generates foreign exchange for the state.

Mining
our
Earth

Yoheli Rafael A 3B

Stop the mining because it generates social conflicts, destroys ecosystems and pollutes the air we breathe.

Mining destroys flora and fauna and can damage our health.

There are not cons, are reasons why the mining should be stopped or reduced.

AINDEX.

Magnesitas de Rubián.

Exploits a deposit located in N.W of Spain, in Lugo (Galicia).

The deposit, due to the volume of its reserves and its homogeneous quality, guarantees, at the current rate, more than 40 years of production.

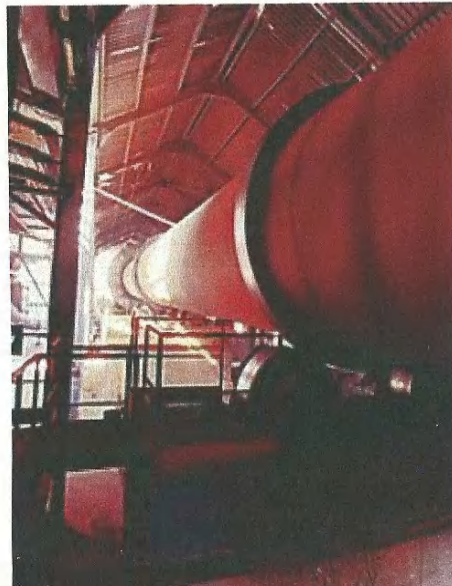

MINERALS & ROCKS.

- Magnesium carbonate.

- Magnesium oxide (magnesite)

*Due to the macrocrystalline structure of magnesite, together with the moderate calcination temperature, a caustic magnesite is obtained, with optimum conditions for animal feeding due to its bioavailability.

USE OF THIS RESOURCE IN OUR SOCIETY.

The main applications of its products, in relation to their sales volume, are:

- Animal feeding
- Fertilizers
- Correction of the PH of agricultural soils.
- Obtaining of magnesium metal.
- Remediation of soils contaminated by heavy metals and hydrocarbons.
