

## MAKING DISSEMINATION PRODUCTS: OUR SUGGESTIONS TO REDUCE INSTITUTIONAL ECOLOGICAL FOOTPRINT

### THE AIM

As a conclusion of this Erasmus + project, students will prepare a REPORT for disseminating ideas and proposals in order to reduce the Ecological Footprint of our school.

Results that students got about the carbon footprint during one school year will be analysed by each team and will be the base to come up with ways to reduce the school emissions.

### THE TASK STEP BY STEP

- ✓ Students work in cooperative groups to produce a report for the school administration with conclusions, pieces of advice and strategies in order to change consumption patterns and behaviours.
- ✓ In the first place, students identify the main emission sources and detect bad habits
- ✓ Students make a list of behaviours to reduce emissions at school.
- ✓ Students draw up a plan to present.
- ✓ Students make a decision about product design and format.
- ✓ Each report has to include:
  - Introduction explaining what the carbon footprint is
  - Their survey results about their School
  - Why this is a problem for the planet in the future
  - Measures to reduce the carbon footprint at the school
  - Planning to introduce measures
  - Calendar to monitorize changes
